

# CMPE 261 - OOP and Concurrent Programming

## Assignment-03

Worth 5% of the assignment mark!

Deadline: 09:00, March 01

In your assignment, write comments for **javadoc** document. It means, you must write comments for all class members that the standard **javadoc** documents can be generated (see. Chapter 5.4 of Walter's book for reference). Define all class instance variables **private** explicitly.

### Problem

Write a complete address book maintenance application. The user of the program has four options: add a new person, delete a person, modify the data of a person, and search for a person by giving the name. You have to decide how to allow the user to enter the value for a new person, display person information, and so forth.
